Monitoring

17 September 2018

Topic: Monitoring

Challenges in modern application development and deployment

How to stay informed on what's happening inside your platform and solution(s)

What Monitoring can do for you

Why should you care?

Do you really know what's going on in your platform?

Do you really know what's going on in your application?

Do you know this immediately and instantaneously?

How quickly are you aware of real/potential/future problems of your solution?

How do you ensure and prove/ document that you met your SLA?

And how much effort do you invest to cover/deliver the above?

Contents of the chapter

Challenges of developing applications in and for the cloud

Benefits of a standardized monitoring approach with tooling support

Basics of the tooling for Monitoring in Microsoft Azure

- Monitoring from the Platform: The Azure Monitor

- Monitoring from the inside out: Application insights

- Monitoring from the outside in: Intune and Microsoft Operations Management Suite - OMS

Take away

Why monitoring is vital for the success of your business

How to easily set up monitoring

How to track and where what's happening inside of your solution

The tools and tooling Microsoft offers for a successful monitoring in the Microsoft Cloud and Microsoft Azure

HOL

Set up monitoring in your code

Track what happens in your platform and solution

The Azure Monitor
